Application/Control Number: 10/783,885

Art Unit: 1711

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Page 2

2. Claims 1-8, 10-11 and 15-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Furukawa.

Furukawa discloses a one component baking composition comprising vanadium anhydride (see abstract and translated examples). The example of the abstract show the polyol component as 40 wt. % solids and the polyisocyanate component as 60 wt. % solids. Therefore the composition componments fall within the amounts specified in claims 5 and 17-19. The disclosure shows the polyisocyanates of the claims (page 4 of translation), and, on page 1, it discloses coated substrates. Table 5 of the examples shows combining the vanadium anhydride with lithium hydroxide, which would form lithium salts of vanadic acid.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Furukawa.

Application/Control Number: 10/783,885

Art Unit: 1711

5. Furukawa discloses the invention of the claims but differs from these claims by adding solvent to the polyisocyanate component and to the isocyanate reactive component prior to mixing with the catalyst or additives.

Page 3

- 6. It would have been obvious to one of ordinary skill in the art at the time the invention was made to vary when the solvent is added to the components because it's been held obvious to select any sequence of performing steps of a process in the absence of new or unexpected results (see MPEP 2144.04-C).
 - 7. Claims 9 and 14 are objected to for depending on rejected claims.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rachel F. Gorr whose telephone number is 571-272-1072. The examiner can normally be reached on Mon., Tues., Thurs., Fri., from 7:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Seidleck can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
